

A new and highly effective solution to deter theft and vandalism automatically at your dealership

Theft and vandalism continue to rise in the retail auto industry. According to the National Insurance Crime Bureau the number of reported thefts of catalytic converters increased from 1,300 in 2019 to 52,000 in 2021. Damage to property can occur in seconds, which is why the iDter System is designed to automatically thwart unwanted intrusion, in less than one (1) second. Intruders will know immediately they are not alone and being recorded with a myriad of rotating voice down messages, sound effects, strobing red/blue lights, and 120dB alarms. iDter's assertive and proportional deterrence is proven to thwart 98+% of unwanted intrusion without the delays of human intervention or dependence on the response of authorities. The remaining one-to-two percent are responded to through intervention by our central station monitoring personnel.

iDter uniquely meets the challenge of both providing rigorous deterrence reaction while still allowing potential customers to browse inventory during early evening or morning hours. The Niō Guardians can be configured during early after-hours to welcome visitors upon detection, increase LED lighting to improve their experience and inform them they are being recorded for their safety. As the evening progresses, the iDter system can communicate a custom voice down message that the business is closed for the evening and to please return during normal business hours. Late at night, the deterrence actions step up to thwart the intrusion and, if necessary, orchestrate actions from all Niō Guardians to amplify the urgency to remove the threat.

Why Choose iDter for your Dealership

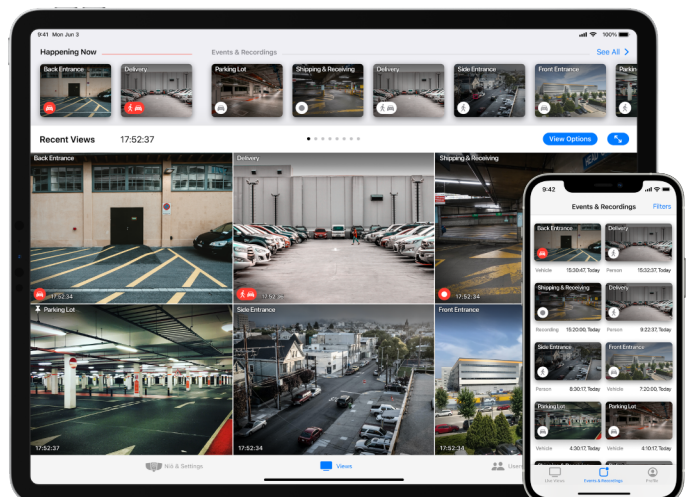

- 98+% reduction in unwanted intrusions
- Deterrence actions within seconds of intrusion
- Reduced dependency on police response time
- Customizable greetings to after-hour customers and deterrence responses to night intruders
- Reduced insurance premiums and mitigated risk of loss for self-insured organizations
- Detailed monitoring statistics enable comprehensive reporting
- Centralized live and archived views of all locations

Niō Guardian and Protector

How It Works

- 1 Niō units are installed at strategic locations on your site
- 2 Niō guardians use artificial intelligence (AI) to automatically detect intrusions
- 3 Niō guardians take immediate action to deter the intruders with:
 - Instantaneous blasts of flood lights
 - Intimidating voice-down messages and audio sound effects
 - Blinding strobes of red & blue LEDs
 - Piercing 120 dB (max) sirens
 - Orchestration of the above actions across multiple Niōs
- 4 Intrusions are verified and alerts with event recordings are sent to your iPhone, iPad, or Android phone
- 5 iDter monitors events to ensure the deterrence actions were successful
- 6 If the Niō deterrence is not successful, iDter dispatches the authorities and directly engages the intruders
- 7 All recordings, deterrence actions, and % deterrence metrics are available to you online
- 8 iDter continually monitors and optimizes the system performance

What is Required

- Power for the Niō guardians: 120-240VAC, 277VAC; 100 W max usage
- Networking via WiFi or Ethernet and Internet access
