# iDter

INTELLIGENT DETERRENCE

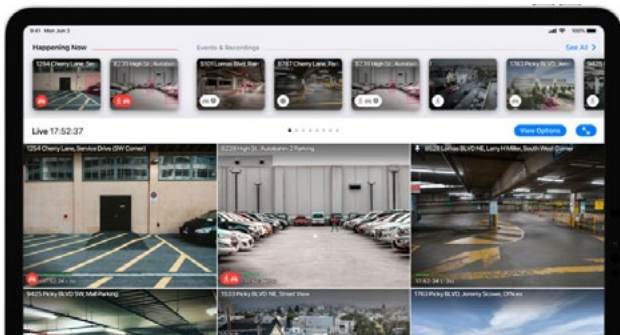

**Niō is the intelligent guardian and protector for your KEYper MX system... and more.**

KEYper has partnered with iDter in offering MX customers its total intrusion deterrence and monitoring solution, Niō. The system uses intelligent guardian nodes designed to recognize intrusion and take immediate and effective actions that **deter 98%+ of intrusion attempts.**

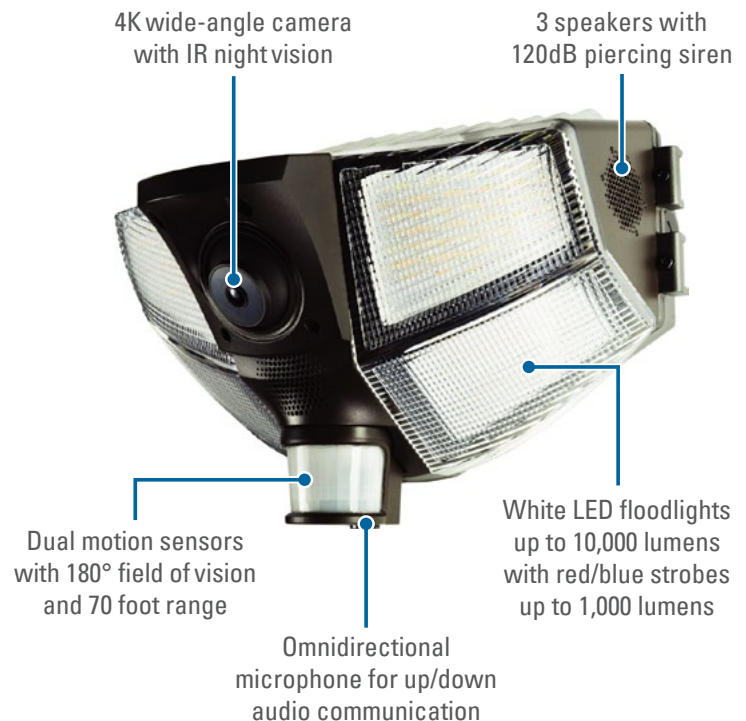

When an intruder is detected, Niō activates an array of deterrence features such as flood lights, red and blue strobes, piercing sirens, and audio communications – while offering instant notification, visibility and control through iDter's mobile apps.

In the chance that intruders are not deterred by the automated Niō guards, iDter personnel issue a video-verified alert through redundant 5 Diamond TMA Certified & UL listed central alarm stations for dispatch of the authorities.

**KEYper MX and iDter Niō provide auto dealerships layered protection for your keys, vehicle inventory and facility.**

## The Ultimate Security Enhancement for MX Systems

## 24/7 Connectivity and Monitoring Services

**Mobile Apps** – Customers have access to mobile apps that allow monitoring of video streams, access to recordings, ability to conduct voice down/up conversations with active intruders, and to manually take control of deterrence actions.

**Alarm Monitoring** – iDter monitors Niō systems during scheduled monitoring periods, verifying the success of deterrence actions, and alerting authorities when needed.

**Results Reporting** – iDter services include a Customer Results Portal with easy access to a system performance dashboard highlighting the effectiveness of the system to detect and deter unwanted intrusions, allowing for easy measurement of achieved performance
